

MEN'S TEXAS JEANS

SIZE	S		M		L		XL		XXL		XXXL
REGULAR WAIST	28	30	32	34	36	38	40	42	44	46	48

It is always good to measure your best fitting Jeans. Do this by placing your Jeans on a flat surface, extend the waist and inseam and get the wrinkles out and pull the area to be measured tight. The waist band should be measured from side to side x 2. Inseam, measure from the crotch seam under the zipper where the 4 parts are joined to the bottom of the Jean leg.

If you ever noticed your dress pants are usually 1 to 2 sizes larger than your Jeans. Jeans tend to shrink a small amount then Stretch back as you put them on and move around. You may find that your favorite Jeans waist and or hip area is larger now than when you bought the Jeans. However, your knee, bottom and inseam will not be larger as they do not have any stress against them.

All of our Jeans have been commercially machine pre-washed / pre-shrunk at least one time unless stated. Many Jeans companies have "Up-Sized" their Jeans 1 to 2" over the stated size. Original "Work wear and Western wear "Older Brands" have not done this for the most part on their original style #'s. Premium, Designer and more expensive Jeans are usually 1 to 2" larger than the size states. TEXAS JEANS that are listed as *Relaxed* are 1" Up-sized (Larger) than the size states, our other styles are true size.
